

Landscaper

POWER BOX

The Landscaper Power Box was designed to add security and be aesthetically pleasing.

The problem:

Most power outlets are mounted on some sort of staking device with an in-use cover. Within a few years these become unsightly, broken or leaning.

The solution:

The Landscaper Power Box offers a flush device with no protruding stakes or devices exposed to the public. The box has a removable plate inside allowing termination of cables. Connected to the plate is an IP67 rated cord and plug that can be hidden in the box when not used or extended out of the box through the grommet notch on the side of the box. Two Pre-cut holes for 1" conduit are on the bottom and also a one half inch drain hole. The Landscaper Power Box measurements are 8"x8"x6"

It is suggested to install the boxes in a minimum of 12" of pea gravel to allow for drainage.

Note: The circuit is suggested to be fed from a GFI breaker in the panel.
